

**INQUIRY INTO DINGOES IN NATIONAL PARKS IN NEW
SOUTH WALES**

Name: Name suppressed

Date Received: 17 July 2026

Partially
Confidential

The protection of our native animals should be a priority of government and all Australians. With increasing urbanisation and development along with the clearing of land for power projects - animals need a voice!!

We demand actual experts in the field along with current and confirmed numbers before any discussion of culling or poisoning animals is determined. Dingos are native and form a vital role in ecosystem management. As proven with the reintroduction of wolves into the Yellowstone np. They are necessary and need to be kept pure! Many regard Alpine Dingos as crossbreeds and this is ignorant! Yet not much is done to remove pigs and goats and cats!

Please refrain from any further action against dingos especially with the dropping of 1080 poison and baits. This is Barbaric!! It gets into the water system, affects fish and smaller animals that then kill larger prey that ingest it. It is the cruelest way for any animal to suffer from the ingestion of this poison it should be banned!! Baits don't stay put - they are often carried by birds and dropped in cattle fields as well.

Instead an inquiry into the mismanagement of national parks cruelty to animals in regard to the poisoning of dingoes and not to mention the horrific brumby cull and destruction of trees for native animals and birds.

An inquiry must be made into the invasive species council and their lack of action with true feral pests like cats, foxes and pigs.

We need to stop and look at the full picture of how these dingos form part of the native ecosystem and stop the cruel end of life torture using poison or bullets.

Thank you
